Abstract:

This chapter explores the implications of climate change for nutrition. We note that agricultural activities contribute to climate change but can also play an important role in adaptation and mitigation strategies. We conclude by examining policy options for addressing the links between climate change and malnutrition. We make the case that a human rights-based approach offers the opportunity to embrace environmental and sustainability concerns more explicitly.

Resource Description

Exposure :

weather or climate related pathway by which climate change affects health

Food/Water Security

Food/Water Security: Nutritional Quality

Geographic Feature:

resource focuses on specific type of geography

None or Unspecified

Geographic Location:

resource focuses on specific location

Global or Unspecified

Health Impact:

specification of health effect or disease related to climate change exposure

Malnutrition/Undernutrition

Mitigation/Adaptation:

Climate Change and Human Health Literature Portal

mitigation or adaptation strategy is a focus of resource

Adaptation

Resource Type:

format or standard characteristic of resource

Review

Timescale:

time period studied

Time Scale Unspecified

Vulnerability/Impact Assessment:

resource focus on process of identifying, quantifying, and prioritizing vulnerabilities in a system

A focus of content
